AUTOBAHN EMERGENCY PROCEDURES

Place your warning triangle and First Aid Kit under the front seat for easy and quick access.

If your vehicle breaks down, move it as far to the right as possible.

Turn on your emergency flashers.

Ensure the your passengers stay in the vehicle and do not walk around on the road.

Position your warning triangle at least 100 meters to the rear of your vehicle. You should open up the triangle and hold it in front of you before start walking.

Emergency telephones are located at intervals along the autobahn. Arrows have been place on roadside reflectors along the autobahn to indicate the direction of the nearest emergency telephone. By lifting the receiver it automatically indicates your exact location to the highway superintendent. If the operator cannot understand the caller, they usually send the German Police to the caller's aid.

Please

**wear your seatbelts
do not drink and drive
take a rest at least every two hours or 150 kilometers
observe all traffic rules
drive defensively and be courteous to your fellow drivers**
